EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's Representative, Jianming Hao (Reg. 54694), on September 12, 2008.

2. The application has been amended as follows:

In the specification: Page 24, line 19, "pulverizagion" has been changed to -- pulverization --.

In the claims:

Claim 12, line 2, "formed by" has been deleted.

Claim 13, line 1, "substrate" has been changed to -- article --;

line 2, "absorbing" has been changed to -- absorbent --.

Claim 14, line 1, "substrate" has been changed to -- article --.

Claim 18, line 4, "consinting" has been changed to -- consisting --;

last line, before "(iii)", -- and -- has been added;

last line, " , (iv) during agglomeration" has been deleted.

Claim 19, line 4, "and classifying" has been deleted;

line 4, "steps" has been changed to -- step --.

Claim 21, line 2, "15" has been changed to -- 20 --.

End of Amendment.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: None of the prior art references, single or combined, teaches or suggests a particulate water absorbing ("PWA") agent having the centrifuge retention capacity ("CRC"), the particle size distribution and the water content within the ranges as required in the instant claims. Although prior art references teach crosslinking agent be added in aqueous solution during the crosslinking step (that is, water being present in the crosslinking agent solution), they fail to teach maintaining water during the crosslinking step so that the water content of 1 to 10wt% in the post-crosslinked PWA agent can be achieved as required in the instant claims. The methods disclosed in the Johnson patent (US 5,684,106) and the Frenz Publication (US 2002/0128618) involve drying to remove solvent after crosslinking, which would necessarily remove water as a result. See Johnson, col. 4, lines 43-45 and example 1, col. 6, lines 22-25; and Frenz, paragraph [0083] and Examples 1 and 2. Therefore, no water content is expected to be retained in the crosslinked PWA agent or water content cannot be controlled within the proportion as required in instant claims. The Wada publication (US 2002/0120074) teaches adding water to affect crosslinking (see Wada, paragraphs [0152]-[0153]) but fails to teach maintaining water content in the PWA agent. Simply adding water to affect crosslinking of the PWA agent is not adequate to retain a water content of 1 to 10wt% as required in the instant claims, and consequently the resulted PWA agent does not possess all the claimed properties. As shown in the instant specification, Comparative Example 1 describes a PWA agent formed from crosslinking polymerization in which a crosslinking

Art Unit: 1794

agent was added with water to effect crosslinking (see instant specification, Reference Example 2). However, the process according to Comparative Example 1 does not comprise maintaining water during crosslinking, and the resulted PWA agent does not have the CRC, particle size distribution and water content that are within the range required in the instant claims. See instant specification, pages 78-80, Tables 2-4.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to H. T. Le whose telephone number is 571-272-1511. The examiner can normally be reached on 9:30 a.m. to 6:00 p.m., Mondays to Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena Dye can be reached on 571-272-3186. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
